

Capture sheet — one per participant

Print or duplicate one copy per session. **Fill it in live.** Reconstructing from memory afterwards is where studies fall apart.

Participant ID: P__ Date: _____
Segment: ☐ Engineer ☐ Accessibility expert
Protocol: ☐ A ☐ B
Backend live: ☐ yes ☐ no (screenshot fallback used)
Recording: ☐ consented

RQ1 · Retrospective — engineers only

Verbatim quotes over summary. Nouns they use naturally, circled.

What they said / did	Verbatim?
_____	☐
_____	☐
_____	☐
_____	☐

Workarounds they described (*highest-value signal — a need real enough to motivate improvisation*)

Workaround	Why they resorted to it
_____	_____
_____	_____

RQ2 · Task observations

Found panel trigger unaided? ☐ yes ☐ no ☐ needed prompt
Time to find panel: _____
Time to first completed eval: _____
Switched theme unprompted? ☐ yes ☐ no
Ran DoubleCheck unprompted? ☐ yes ☐ no
Reached a ship decision? ☐ ship ☐ don't ship ☐ never decided
On what basis: _____
Times they asked for help: _____

Hesitations — one row each, with what was on screen.

Time	What was on screen	What they did / said	Recovered how?
_____	_____	_____	_____
_____	_____	_____	_____

Time	What was on screen	What they did / said	Recovered how?

Expected but absent — anything they looked for that isn't there.

RQ3 · Comprehension — engineers only

Record answers verbatim. Do not paraphrase into "they understood it".

#	Probe	Answer (verbatim)
1	What does this number tell you?	
2	What would make it go up?	
3	85 light / 100 dark — what do you make of that?	
4	So what's this component's score?	
5	What does Unknown mean?	
6	Unknown better or worse than Fail?	
8	"PASS" — what is it saying passed?	
9	What would you do next?	
10	What does approving mean? Who's it for?	

Probe 7 — the one countable number

"Would you ship this?" (asked on the no-CSS fixture: high score, most rules unverified)

☐ YES ☐ NO ☐ equivocal

Their reasoning, verbatim:

Tally across engineers. If YES is common, a bare score with unverified rules is actively misleading and D4 is load-bearing rather than pedantic.

Probe 8 — settles D1

Did they read PASS as being about **the component** or **the evaluation**?

- ☐ the component ("my button is fine")
- ☐ the evaluation ("the check was right")
- ☐ unclear / didn't distinguish

If "the component" dominates, the verdict is functionally about the component whatever the prompt intends — and the two vocabularies should be **merged**, not renamed. That reverses D1 as currently written.

RQ4 · Content validity — experts only

Finding reviewed	Correct?	Evidence sufficient?	Fix as you'd advise?
	☐ Y ☐ N	☐ Y ☐ N	☐ Y ☐ N
	☐ Y ☐ N	☐ Y ☐ N	☐ Y ☐ N
	☐ Y ☐ N	☐ Y ☐ N	☐ Y ☐ N
	☐ Y ☐ N	☐ Y ☐ N	☐ Y ☐ N

Missed — should have caught and didn't (*false negatives; weight heavily*)

Rule set — are these the right nine? What's missing?

Would you trust this in a review? ☐ yes ☐ no ☐ with changes

What would have to change first:

Close

"Is there anything I haven't asked that would help me understand this better?"

Moderator notes — immediately after, before the next session

Most surprising thing they did or said:

Anything I led them toward without meaning to:

Confidence flags to carry into synthesis — mark each observation above as **observed** / **inferred** / **assumed** before filing.
